

James Ortega

IT Support Specialist & AI Systems Engineer

Specializing in Agentic Workflows, Multimodal Applications & Constructive AI

■ Tallahassee, FL

✉ rlocone+jobs@gmail.com

■ port0.me

Systems-oriented engineer specializing in the architecture and deployment of agentic AI workflows, multimodal applications, and high-utility data platforms. Expert in **Constructive AI**—developing production-ready systems that prioritize token efficiency, automated evaluation, and domain-specific accuracy in cybersecurity and medical research.

With over 30 years of hands-on experience in Linux administration, network security, and hardware deployment, combined with a proven track record managing the full AI product lifecycle from rapid prototyping to version-controlled production environments. **CompTIA A+ certified.**

AI & Engineering Skills

AI Orchestration Agentic workflows · Planner/Researcher/Synthesizer · Tool/function calling · Multimodality (text/image/sound)	Operations & DevOps Token analytics · Model routing optimization · GitHub sync/mirroring · Automated logging/auditing
Quality & Security Weekly QA testing · Vulnerability assessment · Hallucination checks · Deduplication logic	Web & Data Link analytics · Content aggregation · Scheduled reporting · Gateway architecture

Selected AI Productions

Mission Control — Agentic Research Console (mission-control.phipi.io)

- Engineered a sophisticated agentic environment for deep-dive research in cybersecurity, medical research, and AI.
- Designed custom multi-step pipelines (Planner → Researcher → Synthesizer) with integrated tool/function calling.
- Optimized for “Least Token” usage with analytics that route tasks to the fastest and most efficient model.
- Implemented advanced logging, auditing, and weekly QA cycles with vulnerability testing.
- Maintained engineering rigor via one-way code sync to GitHub (repo: `mission_control`).

Port0 — Central AI Gateway (port0.me)

- Architected a centralized hub and front door for a suite of AI-enabled properties, unifying disparate tools into a cohesive user journey.
- Designed for extensibility, allowing rapid integration of new AI experiments and production utilities.

Core Technical Skills

Operating Systems Linux (Fedora, Ubuntu, Debian, Arch, Red Hat) · macOS · Windows 11	Networking & Security VLAN implementation · Firewall admin · Ubiquiti UniFi · Structured cabling · VPNs (Tailscale)
Virtualization & Cloud Proxmox VE · LXC containers · VM management · Home lab architecture	Monitoring & Tools Zabbix · Uptime Kuma · Warp Terminal · SSH key management
Privacy & Compliance Email/domain segregation · ProtonMail · Signal · Bitwarden/ProtonPass · MFA · YubiKeys · passkeys	Mobile & Device Security Android · iOS · ADB · LineageOS · GrapheneOS · Bluetooth LE · Wi-Fi reconnaissance

Selected Experience & Projects

Wireless Support Technician — Startup Wireless Solutions Provider

Contract | Wilmington, NC | 2004

- Provided technical support for wireless ISP division utilizing Fedora Core 1 systems.
- Monitored network health and access point performance using Zabbix.
- Troubleshot client connectivity issues in a high-growth startup environment.

Network Security Lead — Community & Church Organizations

Volunteer/Pro-Bono | Various | 2001 – Present

- Designed and deployed open-source firewall solutions (Smoothwall, Endian) to secure organizational data.

- Implemented content filtering, intrusion detection, and secure remote access for non-technical users.
- Provided ongoing IT maintenance and hardware troubleshooting for local community groups.

Secure Remote Infrastructure Deployment — Pandemic Initiative

- Engineered a secure home network to meet state-agency public-facing security requirements.
- Managed a multi-thousand-dollar upgrade of Ubiquiti networking gear with professional structured Ethernet wiring.
- Implemented logical network segmentation via VLANs to isolate work traffic from personal and guest devices.

Advanced Homelab Management — Proxmox Environment

- Architected a Proxmox-based virtualization environment: database servers, web server, Uptime Kuma monitoring, Tailscale mesh.
- Maintains Windows 11 23H2 VM and multiple Linux distros (Arch, Fedora) for OS-agnostic proficiency.
- Utilizes Warp Terminal for streamlined interaction with LXC and VM instances.

Digital Identity & Privacy Architecture

- Developed domain-segregation strategy to phase out legacy providers in favor of custom-domain email.
- Migrated communications to ProtonMail and Signal for end-to-end encryption.
- Manages centralized security repository for SSH keys, configurations, and sensitive notes using encrypted password management.

Education & Certifications

■ CompTIA A+ Certified

Certification ID: COMP001001154143
2003

■ Network Administration Diploma

Core Focus: Red Hat Linux 2.1 Administration
Technical School | 2002

Community Involvement

■■ Privacy Advocate

Regularly consults with peers and the public on digital hygiene, open-source benefits, and online security.

■ Open Source Contributor

Actively engages with GitHub projects to maintain and expand Linux systems knowledge.
